

Fishy business? Dive in to fish out the facts.

# About us

Erik Gebel

Favourite fish:  
*Molva molva*

Karine Real

Favourite fish:  
*Acanthaluteres browni*

Niels Lory

Favourite fish:  
*Rhincodon typus*

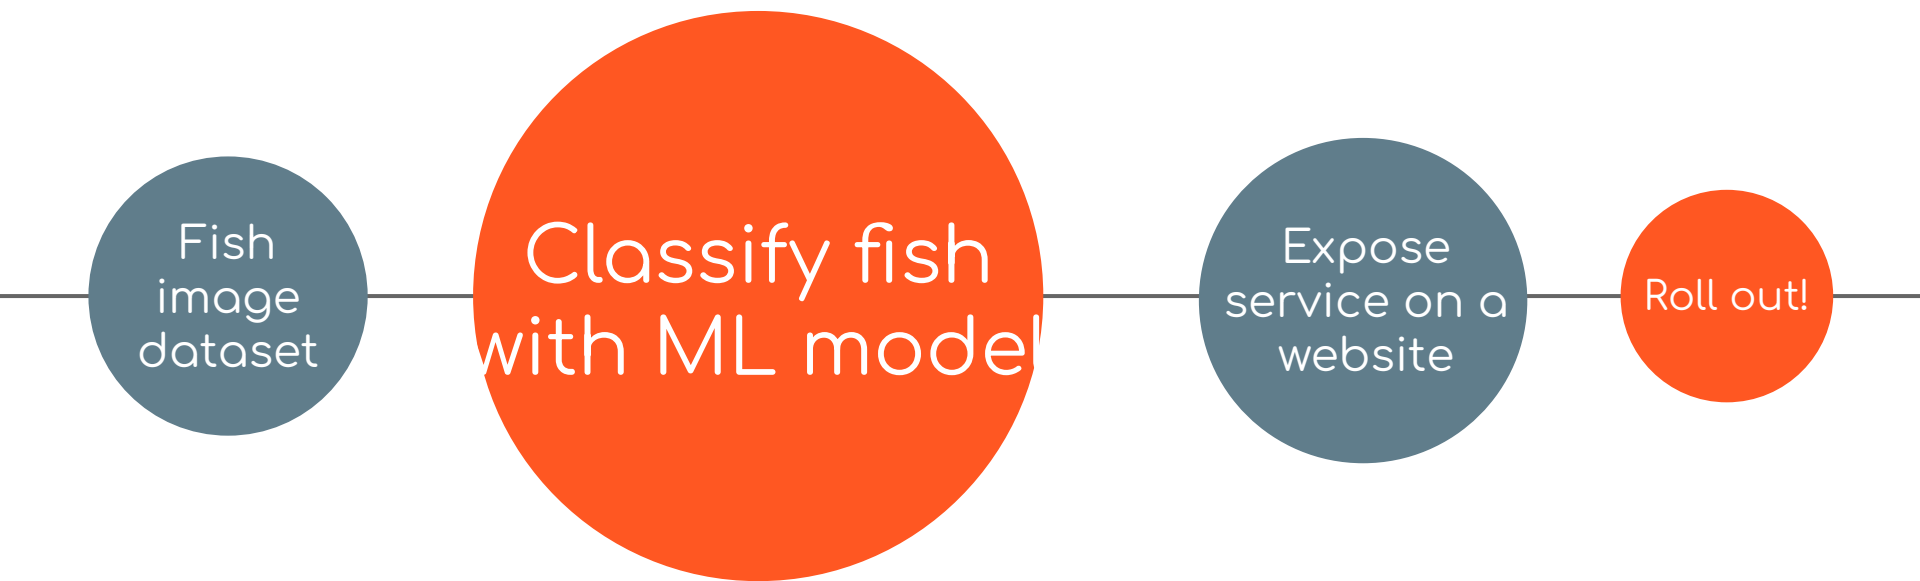

# Outline

1. Trust the process
2. All about the data
3. The chosen model
4. Product design
5. Error analysis
6. Outlook

---

# Trust the process

# All about the data

## kaggle dataset

- Dataset with Approx. ~4000 Images from 468 species of fish found in the indo-pacific (Sripaad Srinivasan - Owner).
- Publication: Anantharajah, K. et al. (2014)

## fish fish facts!

- Build an image classification model (ModelMaker CNN Model)
- Collect fish facts
- Combine the two in a website

# All about the data

## Genus vs. Species

- Genus: A taxonomic category ranking below the family and above the species, designating a group of species
- Species: A group of closely related organisms
- For example, *Acreichthys tomentosus* (one of the fishes in our data)
  - *Acreichthys* is the genus name
  - *tomentosus* is the specific name

Kingdom:	Animalia
Phylum:	Chordata
Class:	Actinopterygii
Order:	Tetraodontiformes
Family:	Monacanthidae
Genus:	<i>Acreichthys</i>
Species:	<i>A. tomentosus</i>

# The chosen model

## The Model

- A CNN model built with the ModelMaker library (part of TensorFlow Lite)
- Utilizes transfer learning based on the EfficientNet-Lite0 pretrained model

## Why did we choose it?

- Achieved the best results with the limited data
- User friendly
- Easy to adjust

## Accuracy of the two models

60% accuracy predicting the genus (193 classes)

40% accuracy predicting species (483 classes)

# Product design

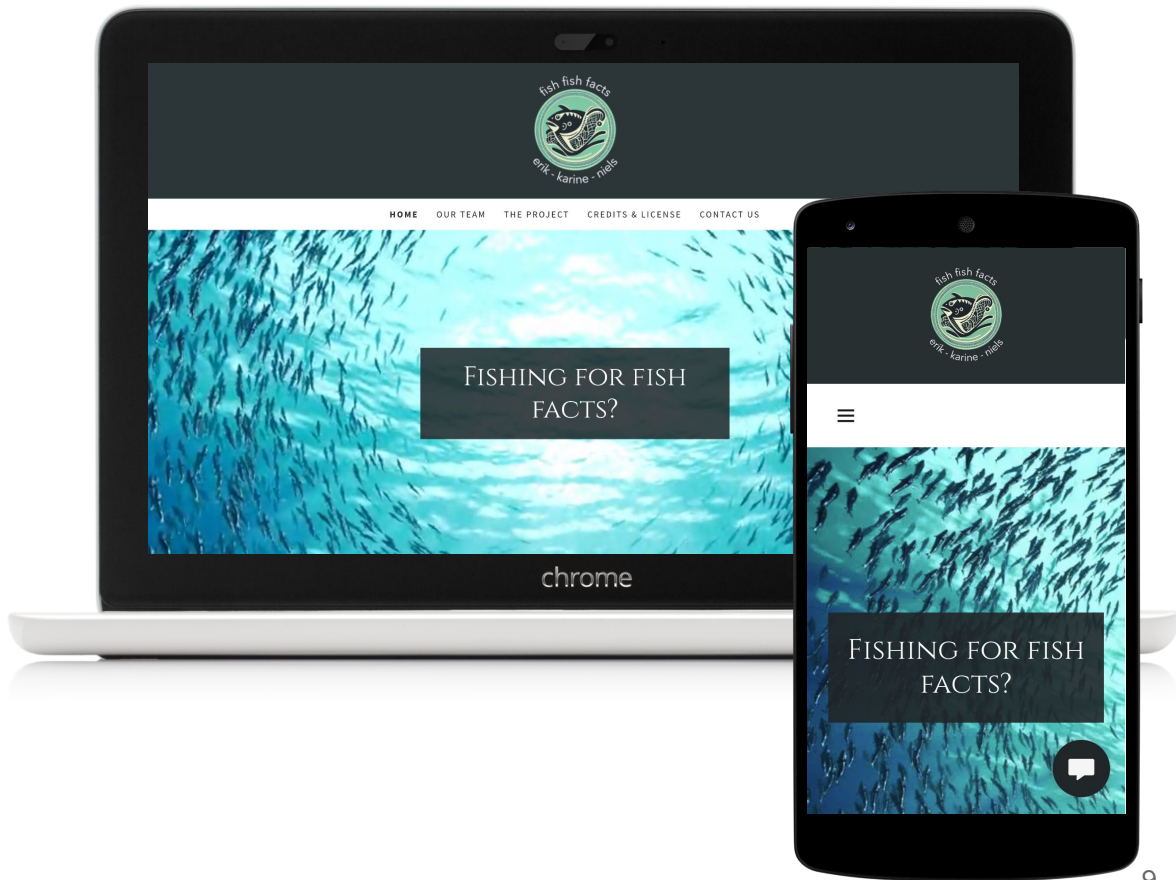

*A conservation project*

# fish fish facts

Dive in to fish out the facts!

A classification model for your  
holiday snapshots or your  
greatest catch.

## FISHPEDIA

Marlins are gourmet fish, that's why they developed long noses.

## ABOUT US

Our Team

The Project

Credits & License

**Time to  
check out  
the product**

# Error analysis

Input image: *Acreichthys tomentosus*

1<sup>st</sup> prediction:  
*Paramonacanthus choircephalus*

2<sup>nd</sup> prediction:  
*Acreichthys tomentosus*

3<sup>rd</sup> prediction:  
*Pervagor nigrolineatus*

# Outlook

1. Collect species data of uploads  
Prompt that asks whether we can use the picture  
Location/time/type of “fishing”
  2. Make data available  
to conservation organizations & scientists
  3. Monetization via donations  
“Donate what you like to help us on our conservation mission.”
-
